

cNET 2.0

Crime Network

Statewide Records Management System

The cNET records management system managed and maintained by DataWorks Plus provides secure information sharing in a single agency or among multiple agencies.

Ensures efficient data entry with modern workflow and logically easy to learn operation.

Designed as a unified solution and provided on a "Software As A Service" (SaaS) platform

Automated backups of all data with redundant servers

Incident-based UCR / NIBRS validation and submission for a seamless workflow.

- Integration available for CAD, UCR, NIBRS, LEJIS, Crime Mapping, and Court Systems
- Integration with CPIN to automate LiveScan demographics entry
- Integration with Google maps and GPS coordinate lookup
- CPIN mugshot import
- E-Filing of Citations with AOPC disposition information
- Advanced reporting engine with flexible data query options
- Ad-hoc report feature with export of data to various file formats
- Global Search mode for quick searches of common fields
- More than 70 standard reports

- Notifications system with task assignment functionality
- Integrated Criminal and Juvenile Complaint creation with AOPC compliant forms
- Fully configurable Interagency information sharing
- Compliant with CHRIA (Criminal History Record Information Act)
- Works with all modern web browsers
- File attachments fully supported
- Day and Night display modes
- A fully customizable dashboard
- Sort and filter data by keywords
- Touch-Screen enabled
- **Coming soon:** E-Filing of Criminal Complaints to AOPC

Web-based application:
Only requirement is a web browser

Cost effective:
No hardware, no capital investment

No charges for software, maintenance or updates

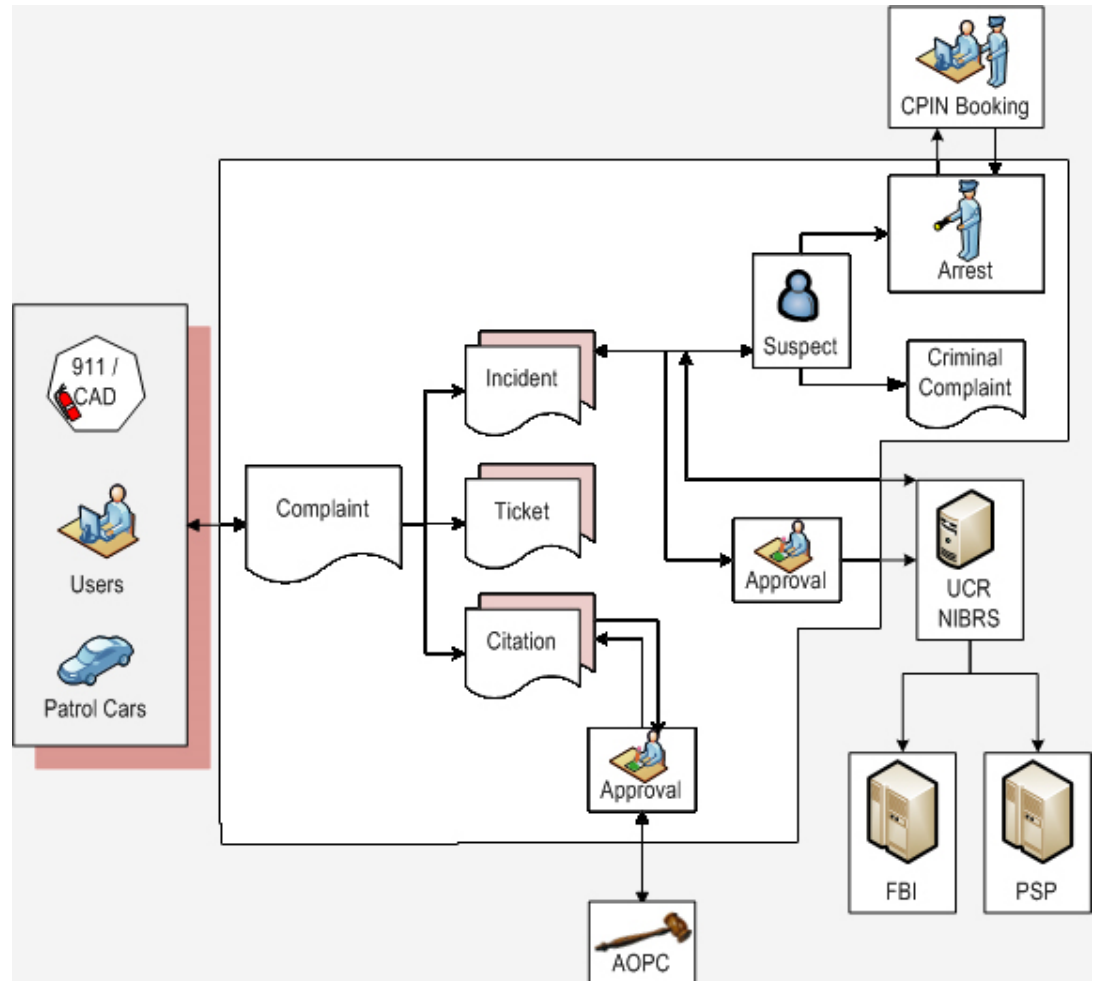

One time set-up fee & then annual fee based on number of full-time sworn officers or equivalent

Hosted and accessed by JNET

All upgrades & enhancements are implemented at the server level and are automatically and immediately available to subscribers

DataWorks Plus
A Leader in Law Enforcement and Criminal Justice Technology

The diagram below further shows how cNET interacts with current law enforcement systems. cNET goes beyond the traditional record's management system by combining the data available from multiple systems in an easy to use format from within one system. Data is received from and sent to other systems in real time, which eliminates redundant data entry, especially for CPIN booking stations.
