

cNET 2.0

Rebuilt • Refined • Reliable

The cNET Crime Network Records Management System provided by DataWorks Plus enables secure sharing of information in a single agency or among multiple agencies. The system provides advanced data queries, enhanced reporting, and available integration with systems such as CAD and booking solutions.

- Incident based UCR / NIBRS validation and submission for a seamless workflow. (Compatibility & availability may vary.)
- A newly modernized workflow ensures efficient and logical easy to learn operation.
- Multi-browser and multi-platform support PC/Mac, laptop, tablet and cell phone.

- Web-based application: The only user requirement is an internet browser
- Cost effective: No hardware, no charges for software or maintenance
- One time setup fee, annual subscription fee based on number of sworn officers
- Data backup and servers hosted by AWS GovCloud
- All upgrades and enhancements are implemented at the server level and are automatically and immediately available to subscribers

- A fully customizable dashboard
- Sort and filter data by keywords
- Notifications & task sections
- Day / Night modes
- Multi-platform and Touch-Screen friendly
- Global Search mode for non-granular searches
- Advanced searching utilizing specific data
- Enhanced data queries as well as an updated reporting engine
- More than 70 standard reports, and the ability to create custom ad-hoc reports
- Integrated with CPIN for booking
- Criminal Complaint forms that automate printing with up-to-date information
- Interagency information sharing— at sole discretion of the user agency
- Compliant with CHRIA (Criminal History Record Information Act)
- Integration is available for CAD, UCR, NIBRS, Crime Mapping and Court Systems
- E-Filing of traffic citations with AOPC disposition information
- Import of vehicle records (Where available)

Development Underway & Coming Soon:

**Crash Reporting Interface
Evidence/Property Management System**

Generation of Search/Arrest Warrants

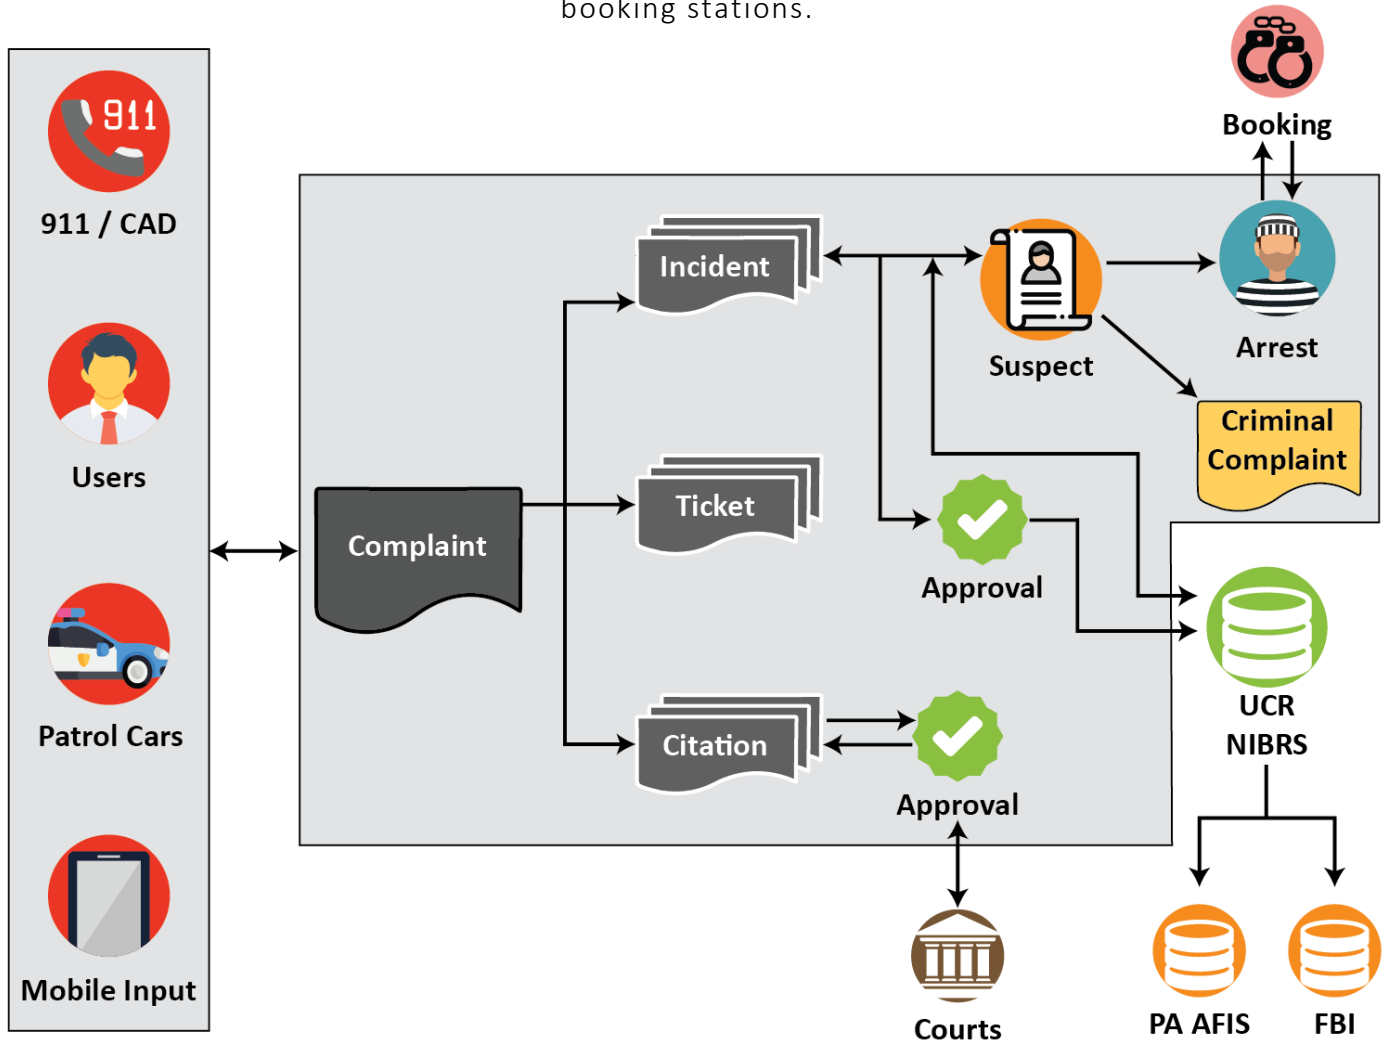

Non-Traffic Citations

cNET 2.0

Rebuilt • Refined • Reliable

The diagram below further shows how the cNET Crime Network interacts with current law enforcement systems. cNET goes beyond the traditional record's management system by combining the data available from multiple systems in an easy to use format from within one system. Data is received from and sent to other systems in real time, which eliminates redundant data entry, especially for booking stations.
